

# LIT Dark

## General Technical

Lit dark must be served from a web server to work as it uses the pixi.js framework and WebGL which will not work if opening from the file system.

## Dependencies

- python 2.7 must be installed on system
- system path must include the python/scripts directory.
  - if installed in default location
    - add to path variable ;c:\Python27\Scripts\

## Instructions To Run

- Run the server.bat file from the *WebGames* directory. If python is installed and configured this should run a webserver on port 8000.
- Run the "Run Game.Ink" shortcut inside the *WebGames/LITDark* directory

If you can not get this working for whatever reason, we have also uploaded the game to an online web server at the following address.
